

on 2 day 83 between 1700 and 2200  
SUBJECT entered a gray bluish  
building with glass doors and approximately 3  
stories. Building resembled an old  
Hill (mfg). SUBJECT was under  
surveillance by two unidentified  
individuals at the time he  
entered the building.

SUBJECT was carrying a briefcase.  
Inside the briefcase were from four  
to eight either 5x7 or 8x10 glasses.  
The photographs were black and  
white with the area of interest  
being the whole. The photographs  
were taken from close up. It was  
similar with little variations, similar  
to a screen that fits on a  
slide projector.

SUBJECT entered the building through  
the glass door. There was a  
reception desk on the left. He  
went up a white stone staircase  
with an iron railing. He ~~had~~  
went to the left on what some  
believed to be the second floor.  
He went down a hallway

walk down gray carpeting. He entered the last room on the left or the second to last room on the left. There was a man (afe) in this room waiting for 5435ECT. 5435 and the second man went to desk lamp which was turned on bright, while the rest of the room was dark. The attention was focused on pieces of glass, which resembled slides that are used with a microscope, and about 5 or 6 <sup>unpolarized</sup> plates, rolls with screw on top and a little chain. These rolls were filled with powder and salts of a sort (afe). The focus of attention here was plastic films on microchips which were on one or two of the slides. This plastic film on microchip was enclosed in a plastic envelope (afe).

Sources ~~the~~ felt that 5435 was involved in both legal and illegal, with 90 to 95% of HHS clearly being legal. The legal side had to do with books and information from papers. The

illegal side was played from the legal. The legal activity provided a cover. Source felt they were working within the legality of the system to accomplish something illegal.
